

ShipMax Issues

1. Quotation Issues

- 1 Salesperson updated in Masters is not automatically reflected in Quotation.
- 2 Start Date and End Date are not mandatory; system allows saving without dates.
- 3 Incoterms: Buyer pays ocean freight, but system behaves like 'customer pays everything'. Field exists but is not connected to pricing or billing.
- 4 Cargo without container count is allowed (e.g., 0 containers carrying 2000 kg), which should not be possible. System should force container selection when FCL is selected.
- 5 Carrier option: Charges can be added, but validation issues exist and currency is not auto-generated.
- 6 After confirming quotation, Booking page should be auto-filled but issues are observed.

2. Booking Issues

- 1 Consignee details are not copied from Quotation.
- 2 Container information is not showing container details (20GP / 40GP) and number of containers.
- 3 System allows saving without container details; container number should be mandatory.
- 4 While deleting charges, system allows saving. It should warn that charges are required before saving.
- 5 Start Date and End Date should be mandatory; currently system allows saving without Start Date.
- 6 Save validation missing: system should block saving if carrier, consignee, container, or charges are missing.

3. Shipment Issues

- 1 Container is not copied from Booking, and container type is not displayed.
- 2 Consignee, Consignor, and Local Client are not mandatory; system allows saving but they should be mandatory.
- 3 Port of Discharge and Routing should be mandatory.
- 4 Most important and critical fields are not mandatory, allowing incomplete shipment records.

4. Consol Issues

- 1 Client, Consignee, and Consignor data are not auto-pulled.
- 2 Confirm button errors exist in Consol; also affects Save button.
- 3 Mandatory fields missing enforcement: Origin, Destination, Port of Loading, Port of Discharge, Carrier, Transport, Container, Voyage Number, Vessel, HBL Number.
